NAME

curl_global_cleanup - global libcurl cleanup

SYNOPSIS

#include <curl/curl.h>

void curl_global_cleanup(void);

DESCRIPTION

This function releases resources acquired by *curl_global_init(3)*.

You should call *curl_global_cleanup(3)* once for each call you make to *curl_global_init(3)*, after you are done using libcurl.

This function is not thread safe. You must not call it when any other thread in the program (i.e. a thread sharing the same memory) is running. This doesn't just mean no other thread that is using libcurl. Because *curl_global_cleanup(3)* calls functions of other libraries that are similarly thread unsafe, it could conflict with any other thread that uses these other libraries.

See the description in *libcurl(3)* of global environment requirements for details of how to use this function.
